Monday at 10 AM Pacific
September 2nd 2019: Encore: The Interstitium
as a New Human Organ

The interstitium was previous believed to be made of dense layer of tissue, but new research published in the journal of "Scientific Reports" indicates that the tissue bundles are actually a network of a tiny, fluid-filled channels connected throughout the human body! Dr. Neil Theise, a pathologist at New York University School of Medicine will explain why this discovery is significant in understanding how cancer cells are transported around the body.
