EPISODE ON DEMAND

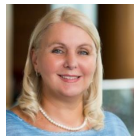

VIEW HOST PAGE

Cyber security is a critical issue that is becoming progressively more critical and at the same time more complex, affecting everything that computes, manages, and communicates information. Concurrently, security assurance and certification are an expensive endeavor and the need for automated, repeatable detection is essential to an organization's business continuity, strategic mission, competitiveness, time to market, and decision-making at all levels. The main factor preventing scalability of certifying systems as safe and secure is the overwhelming reliance on human evaluators. The amount

[Read more](#)

Featured Guest

Djenana Campara

Djenana Campara is President, CEO and Founder of KDM Analytics, a company that provides organizations automated cyber security assessments. Ms. Campara has 30 years of experience in software and security engineering. She serves on the board of directors of the Object Management Group (OMG), an international standards body, and co-chairs OMG's Systems Assurance Task Force, which publishes industry standards for cyber security and systems assurance. She previously served on the Technical Advisory Panel of the National Institute for Standards and Technology (NIST) and as a Board Member of the Canadian Consortium of Software Engineering Research (CSER), an industry directed research program that
