April 23rd 2008: Large Application Delivery: Solving a good problem

Business growth brings its own challenges. With organizations delivering large web applications and content across the globe to multi-platform desktops and mobile devices, there are 2 delivery problems: 1) Scale (number of users and devices) and 2) The flexibility needed to support any device. These problems could create a bottleneck, but just adding more hardware is not the best solution. What can organizations do to enable their infrastructure to support practically limitless bandwidth and performance requirements for demanding needs both now and in the future
