## CIO Talk Network

### CIO Talk Network Wednesday at 7 AM Pacific January 19th 2011:What would it take for "collective intelligence" to become a reality?

Collective Intelligence is a mix of cloud computing and crowd computing where both infrastructures are working optimally. However, cloud computing has issues related to security and privacy, while crowd computing solutions still need improvement in the way they moderate opinion, resolve conflict, and check facts. If we could just get past these issues, we could create a powerful collective intelligence out of a symbiotic relationship of computers, software, and humans. Is this possible? What would it take to make it happen?
